

Summary of the Request MICI-IIC-ME-2017-0122

The Original Request is available only in Spanish; therefore, a summary of the Request in English is presented below:

The Requesters, two residents of Mexico City, alleged that due to the lack of public environmental and social information available on the IIC's portal about the Project, they fear possible unknown impacts on their health as well as to the environment which could be caused by exposure to pollution and hazardous waste transmitted by air and waterways linked to the paper production.

On the other hand, the Request elaborates on a failed attempt made to request information from the IIC regarding this Project and, therefore, urged MICI to provide all public information as per the Disclosure of Information Policy. Failing to comply with their information request, according to the Requesters, represented a possible violation from the IIC with its Relevant Operational Policies.

Finally, the Requesters express their wish that MICI could manage their Request through the Consultation and Compliance Review Phase.
