

Project Outline

Inter-American Development Bank

Country: HAITI
Project Number: HA-L1009
Project Name: ENNERY-QUINTE AGRICULTURAL INTENSIFICATION PROJECT
As of 12-Apr-2005

→ GENERAL INFORMATION

Country:	HAITI
Project:	ENNERY-QUINTE AGRICULTURAL INTENSIFICATION PROJECT
Borrower:	
Total Cost:	\$25,000,000.00
Responsible Division:	EN2 - ENVIRONMENT & NATUR RESOURCES MGMT DIV 2
Executing Agencies:	MINISTERE DE L'AGRICULTURE DES RESSOURCES NATURELLES ET DU DEVELOPPEMENT RURAL;

Number	HA-L1009
Type of Operation:	Specific Investment Operation
Approval Date:	27-Jul-2005

→ DESCRIPTION

The operation will permit the beneficiaries to intensify their agricultural production in a sustainable manner in the Ennery-Quinte watershed. The investments foreseen will seek to stabilize critical areas of the watershed, to rehabilitate a series of small-scale irrigation systems including the recovery from post-hurricane Jeanne damages, and to intensify agriculture development through improved marketing, production and water-user group management.

→ Team

Project Leader: HORTON, JOHN S.
Members: ECHEVERRIA, SILVIA; CORRALES, DENIS; ARIAS, DIEGO; LE POMMELLE, MARION;
Lawyer: ALDANA, MARISTELLA

	Currency	Amount
INVESTMENT LOAN	USD	25,000,000.00
COUNTERPART:		
		Total: 25,000,000.00

→ BANKS COUNTRY STRATEGY

The operation is consistent with the Bank Transitional Strategy within the framework of Agricultural Intensification and support to the recovery post-hurricane Jeanne and the reduction of risk of flood in Gonaives.

→ OBJECTIVES

The operation seeks to increase the income and employment of beneficiaries in the Ennery-Quinte project area and at the same time reducing the risk of further flood and mudslide damage in the watershed.

→ EXPECTED RESULTS

The project will result in a substantial increase in income and employment in the area of the project. At the same time, it will contribute to the protection of the Ennery-Quinte watershed and lowering the risk to the direct beneficiaries and to the broader population downstream. As a project affiliated with the Agricultural Intensification Program ("PIA", 1490/SF), the results of a model of intensification in a zone distinct from the Artibonite Plain, with partially hillside production and small-scale irrigation in a smaller watershed, may well have relevance for a variety of other zones of Haiti.
